

Adapter plate for mounting a BMC A series engine to alternator bracket mounting holes. Measure the ID of your existing stand to determine if a 2" pipe (2.375" OD) or an 1-1/2" pipe (1.990" OD) fits. Also compare the rotation lock location to make sure the handle works and that there is enough over hang of the plate so that when the engine is mounted that the rear cover does not interfere with the vertical brace of the Stand. This is only an issue if the brace is angled. Ignore this for vertical braces.
